25 YEARS

Imaje, a Dover company, specializes in industrial coding and marking equipment including specific applications related to traceability. Imaje designs, produces and distributes equipment using four major marking technologies (inkjet printers, laser coders, print & apply systems, thermal transfer and direct thermal printers), as well as application software, consumables and related services.

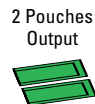

Specializing in challenging applications including retort and beverage pouches, CLP supplies high-quality rotogravure and flexo printed flexible packaging – pouches and rollstock – worldwide.

Ultrasonic Sealer

Herrmann Ultrasonics is the Worldwide Leader in the field of High Speed Ultrasonic Packaging Sealing Equipment and customer-specific application solutions.

SSA
Surdry Stock America
sterilization systems

SSA retort chambers offer a patented Water-Spray design with static and rotary retorts and are available with or without a heat exchanger. Basket and tray loading capabilities are available with full computer controlled operation and data archive. SSA is a Surdry S.L. and Stock America Inc. joint venture company.

Blueprint Automation

Blueprint Automation Case Packer

Blueprint Automation is a world leader in packaging automation, providing solutions for the loading of flexible pouches and other hard-to-handle packages into secondary containers.

PSG ABT 6 Lane Transverse machine, filling and sealing Premade StandUp Retort/shelf stable Chicken pouches.

OPERATION:

Printed, laminated retort roll stock from CLP is converted on a NISHIBE machine into StandUp pouches. Pouches are then loaded into the multi-lane PSG ABT machine, opened, filled and ultrasonically (Herrmann) sealed. The pouches are then retorted in the SURDRY water spray chamber prior to case packing on a Blueprint case packer.
