

End-of-Line

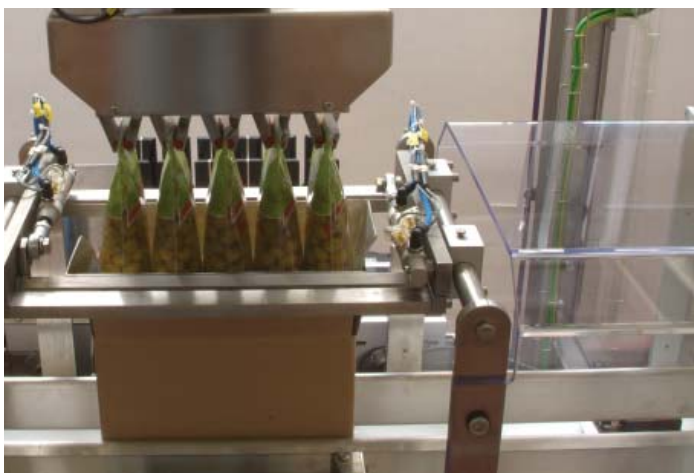

PPI Technologies GROUP and **MEURER** are proud to introduce their new line of pouch case packing solutions

MEURER offers an extended range of modern, pouch case packing solutions for packing of pouches into shippers, display cases, wraparound cases, RSC cases and trays. The **MEURER** machinery program has been developed over a 40 year time period and is now one of the leading providers of secondary packaging solutions to the flexible packaging market.

Pouches come in various sizes and shapes and due to their flexible nature, need to be handled differently to rigid containers. **MEURER** has developed new technologies to be able to handle pouches and to place these into cases or trays without damaging the contents of the pouches. Some pouches require careful handling and, therefore, **MEURER** offers different pouch handling systems like top loading and side loading.

MEURER has the most versatile machine program for your secondary packaging requirements. These include:

- Case side loader;
- Display packer;
- Tray and wraparound packer;
- Tray and film wrapping system with shrink tunnel;
- Pick and place and
- Handle applicator.

For other requirements such as film, palletising and buffering systems, please do not hesitate to contact us to discuss your requirements in more detail.

Hopper Cleaner 948

The **PPI KEN 948 Hopper Cleaner** has been specifically designed for the washing and cleaning of **multihead weigher parts, hoppers and feeders**.

- Two standard programmes - possibility for individual programming
- Hot water rinse (80 °C / 176 °F)
- Process time only about 20-25 minutes
- Washes all types of multihead weigher parts, hoppers and feeders
- Gentle but efficient washing prolongs the lifetime of the goods
- Rotating wash cylinder
- Alarms display for irregularities
- Cylinder can be adjusted according to scale system to optimize the wash process
- The wash cylinder can be changed without using tools - flexible and time-saving solution
- The cleaner can be placed close to the scale - saves transportation time
- Space saving design - doors open inwards
- Dimensions: 960 mm (w) x 960 mm (d) x 2,080 mm (h)

Models:

Conveyor, fall, pharmaceutical, pipeline and metal detector / checkweigher combination

Features:

- 2 channel frequency for product settings
- Closed coil system for stable sensitivity
- IP-66 (optional)
- Periodic self checking
- Automatic set-up function
- Automatic calibration
- Can be connected to a printer
- Convenient maintenance
- Separate detecting head from control panel
- Tunnel made to size and specification

Metal Detector / Checkweigher
